

Blocks For Additional Soil Testing

-  Blocks for additional soil testing
-  CSO basin boundary
-  Recessional or advance outwash soils

Some of the blocks you saw on the map in the previous mailing are not being tested further at this time. Reasons for focusing on a smaller group of blocks now include:

High likelihood of outwash soils

High likelihood of favorable site conditions (i.e.: gentle street slopes, lack of mature trees, wider planting strips, etc.)

Ability to create corridors for improved pedestrian and bicycle safety and continuity of streetscape aesthetics
